

48 x 48 Firepit Base Assembly

The base contains the following

(4) PT tracks

(4) CC tracks

12) Studs

First step is to take you tracks and lay them out.

Place one studs at the ends and at the center of the track so that the dimples line up.

Do this for all the tracks and studs. Each section will have 2 tracks and 3 studs in them.

This is what creates the walls of the base. Stand the 4 walls up and attach them in the corners to one another.

Place the top onto the base and screw from the rails of the top into the base to hold the top on. Place approx. 3 screws on each side.
